

Welcome!

I have developed this e-portfolio to demonstrate my current knowledge and skills, and relevant learning experiences with advanced technology in the Master of Science in Instructional Technology (MIT) Program at the University of North Carolina, Wilmington (UNCW).

What most impressed me in the MIT Program is a project-based team approach to learning and an adaptive learning community. Everyone in the community is on the way to learning and exploring with the dynamic and diversity of the Instructional Technology field. I have learned a lot beyond the program study itself. I have really enjoyed my study here.

In this e-portfolio, you will have the opportunity to view the projects that I have completed both individually and with teams on instructional system design and development both at micro level and at macro level, online course development, multimedia design and development, instructional project management, instructional evaluation, and technology integration.
